Cancer genetics

WHAT WE OFFER
The service provides multidisciplinary clinics with specialist colleagues, to provide focused long term follow up for those found to be at increased risk of developing hereditary cancer. These clinics aim to support the individual and their families, and we are able to put in place early preventative strategies through screening and testing in an all-inclusive way. Multidisciplinary clinics are available for families with BRCA alterations (breast cancer gene), VHL (Von Hippel Lindau), MEN (Multiple Endocrine Neoplasia) and TS (Tuberous Sclerosis). The cancer genetics team is also involved in working closely with support groups active in cancer care including Macmillan Cancer Support, Breast Cancer Care, Genetic Alliance and AMEND

WHAT WE OFFER
The service provides a cancer nurse specialist late effects clinic, oral chemoraphy myeloma clinic and telephone clinic for a more patient centred service

Haemato-oncology cancer

WHAT WE OFFER
The service provides a cancer nurse specialist late effects clinic, oral chemoraphy myeloma clinic and telephone clinic for a more patient centred service

WHAT WE OFFER
The haematological cancer team includes haematologists, clinical and medical oncologists and clinical nurse specialists for lymphoma, leukemia and myeloma. The service is well supported by specialist palliative care clinicians

Gynaecological cancer

WHAT WE OFFER
The service is well supported by the imaging and histopathology teams

WHAT WE OFFER
The gynaecological cancer team includes gyna-oncology surgeons, a medical oncologist, consultants who specialise in diagnostics and colposcopy, a clinical nurse specialist, colposcopy clinical nurse specialist, in addition to a pathologist and a radiologist with special interests in gynaecological cancer

KEY STAFF
Dr Meriel McEntagart - lead clinician and consultant geneticist
Dr Kate Tatton-Brown - interim lead consultant geneticist in cancer genetics
Dr Frances Elmslie - consultant geneticist
Dr Glen Brice - lead genetics counsellor
Dr Vishakha Tripathi - lead cancer genetic counsellor
Dr Merina Ahmed - consultant clinical oncologist
Mr Thomas Ind - MDT lead clinician consultant / gynae- oncology surgeon
Dr Fiona Lofas - consultant medical oncologist / lead for chemotherapy
Mr Paul Carter - lead clinician for diagnostic services / consultant gynaecologist / head of colposcopy
Mr Des Barton - consultant gynaecology surgeon
Mr Paul Bulmer - consultant gynaecologist / lead hysteroscopist

Cardiac surgery

WHAT WE OFFER

- Adult cardiac surgery
- Aortic surgery (major and major complex)
- Coronary artery bypass surgery (CABG) including off-pump (beating heart) and MIDCABs
- Valve surgery - including minimally invasive techniques:
  - Aortic valve surgery
  - Mitral valve surgery, repair and replacement
  - Arrythmia (abnormal heart rate and rhythm)
- Transcatheter aortic valve implantations (TAVI)

SERVICE CONTACT DETAILS

- Mr. Venkatchalam Chandrasekaran - consultant cardiac surgeon
  - Speciality Interest: Coronary artery surgery (Off-pump), mitral valve surgery
  - E: v.chandrasekaran@stgeorges.nhs.uk
- Professor Marjan Jahangiri - professor of cardiac surgery
  - Speciality Interest: Surgery of the aortic valve and aorta, minimally invasive aortic valve replacement and TAVI
  - E: marjan.jahangiri@stgeorges.nhs.uk
- Mr. Robin Kanagasabay - consultant cardiothoracic surgeon

CONTINUED
Echocardiography Department

Electrophysiological intervention: CRT D, CRT I, atrial fibrillation, ventricular tachycardia and AV node ablation

Revascularisation: Minimally invasive off-pump bypass surgery

High risk percutaneous coronary intervention (PCI)

Cardiomyopathy clinics:

- Includes cardiomyopathy, SADS and Marfan’s clinics.
- The weekly inherited cardiac conditions (including cardiomyopathy, SADS and Marfan’s clinic) is run by Dr Miriam Squire and accepts local and tertiary referrals and acts as a triage point to direct patient to the most appropriate treatment strategies.

Medical therapy: Community based and delivered via a network of heart failure specialist nurses across the local and southern counties CCGs

The heart failure nurse specialist clinic: It provides an integrated ‘one-stop’ shop diagnostic service including device therapy and cardiac resynchronisation therapy with direct supervision from Dr Stephen Brecker and Dr Sanjay Sharma in concert with Dr Mandy Skeats.

Inherited cardiac conditions clinics:

- The weekly inherited cardiac conditions (ICC) clinic (Dr Eléhunghun Bahr and Professor Sanjay Sharma) provides a south west London network service that also receives supra-regional referrals from Surrey and the rest of the UK.

- It provides an integrated ‘one-stop’ shop assessment from a multi-disciplinary team in accordance with Chapter 8 of the national service framework and aims to identify individuals who are symptomatic and/or at risk of sudden death from inherited conditions and treat them appropriately, including ICD implantation.

- It focuses on families with unexplained sudden deaths (SADS) and ion channel diseases such as the long QT and Brugada syndromes and cardiomyopathy such as arrhythmogenic right ventricular cardiomyopathy, hypertrophic cardiomyopathy and dilated cardiomyopathy. There is a full-time BHF genetic nurse attached to the clinic as well as weekly sessions from a nurse genetics counsellor and a clinic coordinator.

- Dr Tessa Homfray (medical genetics) works alongside the clinic with monthly meetings and joint parallel lists to facilitate appropriate use of diagnostic genetic analysis and cascade testing.

- Joint paediatric clinics are also facilitated by the clinic with monthly meetings and joint parallel lists to facilitate appropriate use of diagnostic genetic analysis and cascade testing.

- This provides an assured clinical base for Marfan’s diagnostics services are provided through the medical genetics service by Dr Anand Sagar with a cardiac follow-up clinic run by Dr Anne Child in concert with Professor Sharma and Dr Bahr.

Clinical electrophysiology: This provides an assured clinical base for specialist care referrals including device therapy and cardiac resynchronisation therapy for heart failure and basic and complex ablation supported by advanced technologies (CARTO, CARTO-MERGE, ESI array, NAVX, AXV fusion, ablation frontiers and cryoablation technologies including ARCTIC front).

- The arrhythmia clinics deal with all aspects of arrhythmia including atrial fibrillation.

- Marfan’s diagnostics services are provided through the medical genetics service by Dr Anand Sagar with a cardiac follow-up clinic run by Dr Anne Child in concert with Professor Sharma and Dr Bahr.

Clinical electrophysiology: This provides an assured clinical base for specialist care referrals including device therapy and cardiac resynchronisation therapy for heart failure and basic and complex ablation supported by advanced technologies (CARTO, CARTO-MERGE, ESI array, NAVX, AXV fusion, ablation frontiers and cryoablation technologies including ARCTIC front).

- The arrhythmia clinics deal with all aspects of arrhythmia including atrial fibrillation.

- Marfan’s diagnostics services are provided through the medical genetics service by Dr Anand Sagar with a cardiac follow-up clinic run by Dr Anne Child in concert with Professor Sharma and Dr Bahr.
WHAT WE OFFER

- Cardiovascular risk management clinic for primary and secondary prevention:
  - Referrals are accepted for chest pain, dyslipidaemia and vascular health checks
- Rapid access chest pain clinic:
  - Nurse-led clinic for patients with suspected stable angina (new onset, exertional chest pain relieved by rest);
  - Patients with known ischaemic heart disease may be referred as long as they have not had PCI / CABG within the previous six months and are no longer under the care of a cardiologist.

WHAT WE OFFER

- Children are seen within 14 days under the care of a cardiologist.
- Patients with known ischaemic heart disease in adults and electrophysiology, congenital heart disease and arrhythmias.
- Children seen in ears nose and throat (ENT), orthopaedics, dermatology and plastics clinics in the children’s Dragon centre as well as Child Development Centre, booked through those patient specialties.
- Children are seen in inpatients and outpatients (not including outreach clinics).

KEY STAFF

- Dr Robin Ray - consultant cardiologist
  - Special interest: Heart Failure
- Dr Magdi Saba - consultant cardiologist
  - Electrophysiologist and Hon Senior Lecturer
  - Special interest: Ablation, arrhythmias, atrial fibrillation, cardiac resynchronisation therapy, implantable defibrillators, pacemakers
- Dr Raj Sharma - consultant cardiologist
  - Speciality interest: echocardiography, dobutamine stress echocardiography, ischaemic heart disease, valvular heart disease
- Dr Sanjay Sharma - professor of clinical cardiology
  - Speciality interest: inherited cardiac diseases, cardio myopathy, ion channel diseases, SADS, sport cardiology
- Dr Malte Teme - consultant cardiologist
  - Speciality interest: inherited cardiac diseases, sudden death
- Dr David Ward - consultant cardiologist
  - Speciality interest: cardiac arrhythmias and electrophysiology, congenital heart disease in adults
- Dr Avraam Prasad - professor of interventional cardiology and honorary consultant cardiologist
  - Special interests: Percutaneous coronary intervention (including complex procedures), coronary artery disease, coronary spasm, microvascular angina, general cardiology

WHAT WE OFFER

- Rapid access chest pain clinic:
  - Nurse-led clinic for patients with suspected stable angina (new onset, exertional chest pain relieved by rest);
  - Patients with known ischaemic heart disease may be referred as long as they have not had PCI / CABG within the previous six months and are no longer under the care of a cardiologist.

If the child has a need for urgent treatment, such as a fracture, please refer to the relevant service via switchboard.
Paediatric surgery

WHAT WE OFFER

Emergency surgery in children: St George’s Hospital is the regional centre of excellence for emergency surgical conditions in children. It has a paediatric intensive care unit and a full range of tertiary specialties such as cardiology, neurosurgery and interventional radiology all under one roof.

General surgery of childhood: Children with chest disorders ranging from congenital lung lesions, such as empyema.

Thoracic surgery: Treating many conditions including; malrotation, necrotising enterocolitis of the bowel, oesophageal atresia, bowel obstruction, hernia, oesophageal atresia, bowel obstruction, hernia.

General surgery of childhood: Treating many conditions including; malrotation, necrotising enterocolitis of the bowel, oesophageal atresia, bowel obstruction, hernia, oesophageal atresia, bowel obstruction, hernia.

General surgery of childhood: Treating many conditions including; malrotation, necrotising enterocolitis of the bowel, oesophageal atresia, bowel obstruction, hernia.

Oncology surgery: The Trust is working in partnership with the Royal Marsden Hospital, providing holistic care for children with cancer with the team of oncologists, radiologists, specialist nurses and paediatric surgeons.

Paediatric surgeons provide care for the full spectrum of complex paediatric surgical conditions including:

Neonatal surgery: For babies born with conditions requiring surgery, who acquire surgical conditions. Our state of the art neonatal unit provides all the intensive care required even for the smallest babies. Treating many conditions including; anorectal anomalies, Hirschsprung’s disease, congenital diaphragmatic hernia, oesophageal atresia, bowel obstructions and abdominal wall defects such as gastroschisis and exomphalos, malrotation, necrotising enterocolitis.

Oncology surgery: The Trust is working in partnership with the Royal Marsden Hospital, providing holistic care for children with cancer with the team of oncologists, radiologists, specialist nurses and paediatric surgeons.

Thoracic surgery: Children with chest disorders ranging from congenital lung lesions, such as cystic adenomatoid malformations and lung sequestrations to severe chest infections such as empyema.

Vascular anomalies: Provides holistic care for children with rare conditions including haemangiomas, lymphangiommas and arterio – venous malformations.

Upper gastrointestinal surgery: Children with upper gastrointestinal problems such as gastro-oesophageal reflux and gallstones.

Lower gastrointestinal surgery: Management of children with complex lower gastrointestinal problems such as anorectal anomalies and Hirschsprung’s disease. We are also the regional centre for the surgical care of children with inflammatory bowel disease such as crohn’s disease and ulcerative colitis.

Minimally invasive surgery: The paediatric surgery team at St George’s Hospital are experts in using minimally invasive techniques (laparoscopy and thoracoscopy). We are one of the few centres in the world to apply laparoscopic techniques in small babies.

Antenatal counselling: Many abnormalities are detected on routine ultrasound scanning of pregnant mothers and some of these conditions will require surgical intervention after birth.

Paediatric surgeons provide a detailed antenatal counselling service for parents explaining the conditions, the likely outcomes and the surgical management helping to reduce anxiety. The parents are therefore able to meet the team before their babies are born and gain a better understanding of the care their baby will receive. This also allows to plan the optimal time and method of delivery.

Paediatric urology

WHAT WE OFFER

Antenatal urology: Abnormality in the kidneys or the bladder of the developing fetus is commonly seen on antenatal ultrasound scans allowing us to detect problems early on, although these abnormalities improve spontaneously during the pregnancy or after birth.

Surgeons and nurse specialists provide an integrated antenatal counselling service for all significant paediatric urology referrals within the fetal medicine department and ensure that the correct safe and appropriate management for each individual child during the pregnancy and in the potentially complicated period after the child’s birth. The paediatric surgery department runs two to three antenatal urology clinics every month.

Continence: Incontinence in children can be devastating for both the child and the parents. Wetting can occur in the day, at night, or due to a congenital problem within the bladder.

Because of this broad range of causes and impacts we have created a wide ranging treatment program. All children are assessed by expert surgeons or clinical nurse specialists. We offer continence clinics in the community or in local hospitals closer to the child’s home.

At St George’s Hospital all children receive the best care, tailored to their particular needs and condition. We provide clinics and treatment for day and night time wetters along with specialist complex clinics for children with conditions such as gigaile incontinence.

Spina Bifida: The paediatric urology team are leaders in spina bifida management and provide all aspects of care whether it is psychological or surgical along with monthly combined multidisciplinary clinics for children and their families.

Once the patient reaches the age of 18 they are transferred to our adult urology service for further care.

## Gynaecology

### WHAT WE OFFER

**Acute gynae unit (AGU)**
This runs from 7.00 - 21.00 seven days per week. The public can access this facility through our ED walk in service.

**Two week role one stop cancer clinic**
This clinic (clinic A) is in the Lanesborough wing and is for patients who require an urgent cancer appointment; a consultant led one-stop-shop with possibility of treatment on the day. Patients may have variety of scan's including various vaginal ultrasound scan and hysteroscopy.

**Colposcopy/ultrasound clinic**
If treatment is needed, the majority of women are treated in an outpatient clinic setting under local anaesthesia.

**Urogynaecology/ pelvic floor and perineal clinic**
(Uro)gynaecology service is suspended until further notice)

**Fibroid clinic**
Mr Hugh Byrne and Prof Isaac Manyonda offer a fibroid service with treatments including hormonal, embolisation and surgery including hysteroscopic and laparoscopic removal. The Trust’s policy of fibroid removal and treatment of menorrhagia has been ever more sparing. The Trust runs three specialist myoma clinics per week.

**Endometriosis**
Mr Hugh Byrne and Mr Thomas Ind and the severe endometriosis team are BSGE accredited and run two weekly outpatient clinics from clinic A at St George’s Hospital.

**Recurrent miscarriage**
For patients who have a high level of recurrent miscarriages and wish to discuss their options of pregnancy and treatment for the miscarriages they experienced. It is run weekly in clinic A by Prof Isaac Manyonda, consultant gynaecologist and obstetrician.

### WHAT WE OFFER

**Termination of pregnancy (TOP)**

Offers outpatient consultations, counselling and both medical and surgical terminations for all women. This includes TOPs for women who have high BMIs, diabetic, HIV and cancer. We accept referrals through a multitude of avenues including direct referral or walk in. OP hysteroscopy

The service offers a diagnostic element as well as treatment in the form of sterilisation through the mirena coil. This service in clinic A Lanesborough wing, runs four days per week and is run by Mr Paul Bulmer and Ms Sridevi Rao with clinical nurse specialist input.
Initiation of anticoagulation for stroke prevention in atrial fibrillation (AFib) including assessment and counselling and consideration of suitability for the novel oral anticoagulants (NOACs) - clinics on Monday and Thursday morning.

INR monitoring for patients on warfarin with finger prick INR using CoaguChek in clinics and at St John's and by venous INRs for the remainder of the open access service.

Balkhian Health Centre, Brocklebank Health Centre, Southfields Group Practice. Dosing advice in person at clinics and by post and telephone for open access patients.

Management of minor bleeding with telephone for open access patients.

INRs for the remainder of the open access service.

Acute venous thromboembolism (VTE) management including anticoagulant initiation and monitoring with assessment of suitability for ambulatory management of DVT and PE. Duration of anticoagulation determined on an individual basis based on risk of recurrence; evaluation of suitability for NOACs for VTE is being introduced.

Follow up of all VTE cases with appropriate referral for specialist services when indicated.

Vascular surgery for upper limb VTE and ilio-femoral DVT; to the regional team following major PE; to other haematology subspecialists; to cancer surgeons or oncologists.

Thrombophilia clinic for counselling when indicated.

Multidisciplinary clinics for pregnant women: prophylactic anticoagulation compliant with Royal College of Obstetrics and Gynaecology (RCOG) guideline 37a and NICE CG 92; therapeutic anticoagulation for VTE compliant with RCOG guideline 37b; anticoagulant management for mechanical heart valves.

Paediatric INR testing using finger prick INT test and warfarin dosing.

Support for self testing and self dosing patients including CoaguChek 'side by 'side' testing in the laboratory.

To vascular surgery for upper limb VTE and ilio-femoral DVT; to the regional team following major PE; to other haematology subspecialists; to cancer surgeons or oncologists.

Haematology (clinical)

**WHAT WE OFFER**

- Comprehensive haemato-oncology services including autologous and allogeneic stem cell transplantation
- Adult and paediatric haemophilia services (part of the South London Haemophilia Network)
- Adult and paediatric haemoglobinopathy services
- Expertise in the management of complex immunohaematology cases
- Expertise in the investigation and management of adult and paediatric congenital and acquired bone marrow failure syndromes
- Paediatric haematology and oncology as part of the Royal Marsden Hospital / St George's Hospital joint

| Infectious diseases - clinical infection unit

### Key Staff

- **Prof Derek Macallan** - Clinical lead
- **Prof Thomas Harrison** - Academic lead
- **Dr Tihana Bicanic** - Consultant
- **Dr Catherine Cosgrove** - Consultant
- **Dr Angela Houston** - Consultant

### Service Contact Details

- **Emergency referrals**
  - Patients with acute infection problems can be referred 24/7 via St George’s switchboard. The first point of contact is the on-call Specialist Registrar (SpR). GPs can also seek urgent advice on patient management through this route.

- **Outpatient referrals**
  - Referrals (including “e-Referral”) can be made by letter or fax. Patients are triaged and will be seen in most appropriate clinic. Specialist clinics include those dealing with complex TB, including MDR-TB, HIV, and HIV-co-infection clinics (HIV-hepatitis and HIV-TB) are held in the Courtyard Clinic.

- **Rapid access infection service**
  - We now operate a rapid-access ambulatory care clinic for patients who need urgent care but do not need an emergency referral. To refer to this service contact the on-call SpR or our specialist Physician Associate (both via switchboard).

- **Advice**
  - Consultants can be contacted by GPs for advice on 020 8725 5629. Unfortunately we cannot provide a direct advice line to members of the public. Our Consultant staff are also available through the “kinesis” e-mail advice service for participating GPs.

### Management and Support

Maternity and antenatal services

WHAT WE OFFER

- General antenatal (consultant-led + midwifery team)
- Antenatal clinics are run seven days per week, from 8.00 to 21.00
- Maternal medicine and gestational diabetes
- Pre-conceptual care to maternal health by reviewing medications and offering safe alternatives where appropriate to those women, whose drugs are clearly associated with teratogenicity
- Perinatal Psychiatry
- The perinatal psychiatry service is a small highly specialist service providing a psychiatric liaison service to the maternity unit at St George’s Hospital and a consultation-liaison service to primary care and specialist mental health services in the five boroughs of south west London
- Early pregnancy unit
- The early pregnancy unit or (EPU) is a walk in service offered to mothers who have had confirmation of their pregnancy and who have concerns about their fetal development. The EPU is available Monday to Saturday from 7.30 - 16.30 at St George’s Hospital on the ground floor of Stanesborough wing in clinic A
- Postnatal clinic
- The community team carry out regular home visits to provide clinical postnatal input
- Intra-partum care
- Services include an early pregnancy assessment clinic, antenatal and postnatal clinics, and a day assessment unit for pregnancy problems
- There is a specialist regional service for complications of pregnancy. There are specialist clinics for women with medical problems, such as diabetes, and there is also a teenage pregnancy clinic
- The midwifery team provides antenatal services in the community and at the hospital and most women can choose where they give birth; home, delivery suite or birth centre
- The hospital has 13 delivery rooms and 40 postnatal beds, including eight single rooms. In addition to midwives, obstetric staff and auxiliaries, the department is supported by a dedicated team of anaesthetists who provide 24 hour cover for obstetric emergencies, and epidurals for pain relief where appropriate

KEY STAFF

- Ms Jessica Moore - care group lead for obstetrics
- T: 020 8725 0079
- Sec: Sandra Gaul
- T: 020 8725 1975
- Sue Hendy - director of midwifery and head of nursing women’s services
- T: 020 8725 2022
- Sec: Sandra Gaul
- T: 020 8725 1975
- Dr Amanda Bhider - consultant in obstetrics and fetal medicine

CONTINUED
### What We Offer

**Maternity and antenatal services**

- The Carmen Suite midwifery-led birth centre supports a natural and active approach to birth and has two birthing pools
- The Rainbow Team provides antenatal, home delivery and postnatal services for Wandsworth and some parts of Merton. GPs can self refer for home birth using the form below or see your GP for referral
- **Multiple Pregnancy Service**
  - Detailed ultrasound scanning (in the first, second and third trimesters) for the diagnosis and confirmation of fetal abnormality
- Fetal cardiac ultrasound scanning for the screening and diagnosis of fetal heart abnormality (between 11-14 weeks and >18 weeks)
- Investigation, therapy and management of suspected or known fetal abnormality
- Co-ordination of the regional Chorionic Villus Sampling (CVS) service
- Monitoring and treatment of women with Rhesus disease / Rhesus alloimmunisation
- Diagnosis and treatment of twin-twin transfusion syndrome (TTTS) syndrome, offering fetoscopic laser ablation
- Pre-pregnancy counselling service for women with maternal medical conditions or previous fetal abnormality
- Combined fetal medicine / genetics clinic / paediatric surgery clinics

**Maxillofacial surgery**

- Head and neck cancers
- Neck lumps
- Salivary gland tumours
- Facial trauma, both hard and soft tissue
- Facial deformity
- Reconstructive surgery of the mouth and jaws
- Surgical dermatology for face and neck cancers

Neurology - stroke and transient ischaemic attack (TIA)

WHAT WE OFFER

A 24 hour, seven day a week service for thrombolysis (giving ' clot-busting' drugs to open up blocked arteries causing stroke)

The stroke service has two wards:
- 20 bed hyper acute stroke unit (William Drummond ward) which gives immediate care for patients who have a suspected stroke
- 16 bed Stroke Unit for local patients (Bodice Stroke ward)

Patients needing further rehabilitation may be transferred to the Wolfson neurorehabilitation unit on Thomas Young Ward at St George’s hospital or Gwynne Holford ward at Queen Mary’s Hospital, Roehampton

The service has six consultants and a multi-disciplinary team including specialist therapists and nurses. One of the consultants has a special interest in rehabilitation of stroke patients and works closely with colleagues at the Wolfson and Queen Mary’s Hospital

Outpatient services include a follow up clinic for patients who have had a stroke and a one-stop clinic for those who have had a transient ischaemic attack (TIA). This is a ‘mini stroke’ where the blood supply to the brain is only briefly interrupted and symptoms of stroke are temporary

More information on the different types of stroke is available from the Stroke Association at www.stroke.org.uk

KEY STAFF

- Dr Geoffrey Cloude - consultant stroke physician (cerebrovascular disease, stroke, tia, stroke rehabilitation)
- Dr Usman Khan - consultant neurologist
- Dr Caroline Lovelock - clinical lecturer in neurology
- Dr Barry Moshanshan - consultant in stroke medicine
- Dr Anthony Pereira - consultant neurologist
- Gillian Cuckie - stroke clinical nurse specialist

New born services

WHAT WE OFFER

At St George’s we provide specialist care for around 650 babies per year including those that are born prematurely and those that require surgery. We are the regional centre for the South West London Neonatal Network. Our network has 9 hospitals providing maternity and newborn services.

Wolfson has a large specialist fetal medicine unit, and many women with complex pregnancies are referred to us for expert care. We provide the majority of intensive care for newborn babies in south west London as well as providing some specialist services for neighbouring networks, covering a large geographical area extending down to the south coast. Once babies no longer require specialist care at St George’s, we move them to a neonatal unit at one of our network hospitals so that families can be closer to home, and to allow us to take new babies that require our specialist services.

What we offer:

The service provides specialist medical and surgical care to around 650 babies per year

Has facilities for a total of 43 cots comprising: 12 intensive care, 13 high dependency care and 18 Special Care cots

A Transitional Care Unit located on the postnatal ward

An integrated neonatal unit where babies receive specialist medical and surgical intensive care

Five parent bedrooms where parents can stay on the unit – these are allocated depending on need, and are also used for parents to stay with their baby for one or two nights before going home

Facilities in the hospital grounds where parents who live far away can stay (Ronald McDonald House)

Specialist multi-professional paediatric surgical services – including general surgery, ENT, neurosurgery, urology, and a specialist spina bifida service

Dedicated counsellor to provide psychological support for parents

Paediatric infectious diseases service - we are one of three centres in the UK designated to look after children with HIV

Weekly neonatal follow up clinic

Twice monthly neonatal cardiology clinics

Specialist neonatal developmental clinic for babies born before 30 weeks gestation

Community neonatal nursing team to support babies in the community

discharged to Wandsworth from our unit

Antenatal (before birth) counselling of prospective parents by appropriate healthcare professionals if problems are expected; this may include neonatologist, cardiologist, geneticist or surgeon alongside our fetal medicine colleagues

Monthly neonatal respiratory clinic for infants with chronic lung disease and congenital lung lesions

Specialist neonatal developmental care for babies born before 30 weeks gestation

Our clinics are designed to allow follow up of babies discharged from the neonatal intensive care unit, and we are unable to accommodate direct referrals to outpatients.

### Foot & ankle surgery

We offer a comprehensive adult foot and ankle surgery service, supported by dedicated physiotherapists, podiatrists and orthotists.

### Knee surgery

We offer a complete service for patients with knee problems, both surgical and non-operative.

### Soft tissue knee surgery

We offer various types of surgery, including scoliosis and kyphoplasty, to treat patients with knee problems.

### Spinal surgery

We offer a comprehensive range of treatments for spinal problems, including degenerative spinal disease and metastatic spinal disease.

### Shoulder surgery

We offer a dedicated shoulder and elbow unit at St George’s Hospital that provides a full comprehensive range of treatments for shoulder and elbow problems, with both arthroscopic and open surgery treatments. We also offer this service at Epsom Orthopaedic Centre (EOC) in Epsom.

**Services for abdominal aortic aneurysms**

- Includes a battery of investigations aimed at defining surgical risk (pulmonary function, echocardiography, cerebral haemodynamics, renal function and objective exercise testing), as well as diagnostic imaging of the aorta. This one-off outpatient rapid assessment is run by a dedicated Senior Nurse Practitioner who then acts as patient liaison for all patients with a significant aneurysm.

**Thoracic and thoracoabdominal aortic disease**

- Due to the complexity of these pathologies close collaboration between vascular surgery (Professor Marjan Jahangiri) and vascular radiology (Dr Rob Morgan), has been developed to assess and treat these patients in a multidisciplinary fashion. The thoracic pathologies include Type B aortic dissection, thoracic aortic aneurysms and thoracic aortic occlusions. Most of these pathologies are treated with endovascular procedures where possible.

- Many of the patients are admitted as emergencies but we are happy to consider elective referrals for any patients with complex aortic disease.

**Services for carotid atherosclerosis**

- In conjunction with the regional stroke unit, the St George’s Hospital vascular institute offers a comprehensive service for patients with carotid atherosclerosis. Indications for surgical intervention are defined for symptomatic patients with a stenosis greater than 70% and in some selected cases for patients with non-symptomatic stenosis greater than 85%. Outpatients with suspected carotid atherosclerosis are assessed in a one-stop clinic with access to immediate duplex scanning. All patients who have symptomatic carotid stenosis are subject to multidisciplinary discussion, which includes stroke physicians, neurologists, vascular surgeons and interventional radiologists.

**Vascular access for hemodialysis**

- The unit also caters for our network of dialysis population (1,200 patients between St George’s Hospital and Epsom St Helier’s) we have two dedicated surgeons who have specialized in complex vascular access for patients with central venous occlusion or stenosis or multiple failed or infected access.

**Varicose veins**

- We provide patients with a ‘one-stop’ service for the assessment of varicose veins. Each new referral is assessed by a vascular surgeon, and a Duplex ultrasound scan is performed at the same visit.

- We have introduced an outpatient based treatment service with endovenous and injection sclerotherapy which prevents the requirement for general anaesthetic and admission to hospital. Patients attend the clinic, undergo treatment for their varicose veins under local anaesthetic in a specially equipped ‘minor-op’ room, and leave usually within one hour.

- Lower limb revascularisation: The Institute has developed a multidisciplinary service for the management of lower limb occlusive disease. Endovascular techniques have become the mainstay for selected lower limb vascular disease, though major bypass surgery is still occasionally required.

- Upper limb venous thrombosis and thoracic outlet syndrome: We encourage urgent referral when venous thrombosis is suspected and can make a rapid diagnosis with duplex ultrasound. If this confirms the clinical suspicion, thrombolysis is commenced. This is almost always successful if performed within 2 weeks of the onset of symptoms, an is followed by decompression of the thoracic outlet, usually by excision of the first rib.

**Hyperhidrosis and facial flushing**

- We offer a number of treatment options for excessive sweating. The control of sweating and flushing is via the sympathetic nervous system. Overactivity of these nerves can contribute to hyperhidrosis and excessive facial flushing. One treatment option is the local injection of Botulinum toxin (Botox) which we perform in outpatients.

- This is a relatively safe, quick and painless procedure, with excellent success rates, though in most people treatment needs to be repeated in the future.

- Endoscopic thoracic sympathectomy is also performed for a permanent result.

Queen Mary’s Hospital A-Z

Assistive technology service

WHAT WE OFFER

All clients are assessed at home by the senior occupational therapist, service lead for assistive technology.

Equipment is carefully tailored for each individual taking into account their goals.

Training for clients by the engineer following installation of a system.

Maintenance and regular servicing which is provided by the assistive technology provider.

Reviews, on-going support and advice are provided by the occupational therapist to clients, carers and healthcare professionals.

WHAT WE OFFER

General adult and paediatric diagnostic audiology:
Dedicated community based clinics for diagnosis of hearing disorders in adults over 55 years and children of all ages where consultant input is not required.

Audiology clinic for adults with learning disabilities:
Dedicated community based clinics for diagnosis and management of hearing disorders in adults held with the specialist speech and language therapists.

Routine audio-vestibular assessment:
These are offered through referral from specialist ear, nose and throat colleagues.

Adult hearing aid service:
Provides and maintains a wide spectrum of up-to-date hearing aids for adults and children of all ages, working according to national audiology protocols to ensure tailor-made hearing aid provision to meet the individual’s needs. As part of this service three weekly self-referral walk-in hearing aid repair clinics are available for all NHS hearing aid users:
- Monday 9.30 - 12.00
- Wednesday 13.30 - 16.00
- Friday 9.30 - 12.00

Tinnitus and balance support clinics:
A specialist team of audiologists provide individual support for adults with tinnitus and balance disorders.

Bone anchored hearing aid (BAHA) programme:
In collaboration with the ENT Department a comprehensive bone-anchored hearing aid programme is available to suitable candidates.

Newborn hearing service:
Full diagnostic assessments are offered to babies who are referred from the newborn hearing screening programme.

Paediatric hearing aid service:
Dedicated clinics where hearing aid fittings are undertaken by specialist and advanced audiologists, following national protocols, including review as required.

**HOW TO REFER**

- E-Referrals or direct referral to Queen Mary’s Hospital.
**Fitness - Bader gymnasium**

**WHAT WE OFFER**

The Bader gym is a purpose built facility which offers fitness for all. It has a wide range of equipment and has been designed to accommodate the needs of people of all ages, including able bodied and those with disabilities.

The gym is open from 8.00 to 21.00 Monday to Friday and the facilities are based on a ‘pay as you attend’ basis. The gym is also used by physiotherapy out-patients who run various rehabilitation classes which are closed to all gym users.

The gym is staffed by trained Fitness Instructors with the necessary skills and experience to ensure that the needs of everyone attending the gym can be met. A medical referral to the gym will be requested for any individual that presents any medical conditions; this enables the fitness instructor to meet the individual needs of the client.

- Dr D Gerry - elderly care physician
- Kate Lancaster - senior physiotherapist

**SERVICE CONTACT DETAILS**

**WHAT WE OFFER**

The Gait Analysis service:

- Provides a detailed analysis of walking to guide and support clinical interventions including neuro-rehabilitation, orthopaedic surgery, orthotics, prosthetics and spasticity management.

The Gait Laboratory also undertakes assessment of upper limb function using standardised tools. These assessments are usually undertaken to assess the effectiveness of spasticity management and electrical stimulation.

Gait (walking) analysis is undertaken using a variety of techniques including:

- Static examination
- Kinematic, kinetic and video analysis
- Muscle activity using surface electromyography (EMG) techniques
- In-shoe pressure measurement

For assessment of upper limb function the following tests are typically used:

- Action Research Arm Test
- Box and Blocks Test
- Jebsen-Taylor Hand Function Test
- Nine Hole Peg Test
- Dynamometry

The Functional Electrical Stimulation (FES) service:

- Provides an assessment of the appropriateness of electrical stimulation as an intervention for patients referred with an upper and / or lower motor deficit of central neurological origin.

Should the assessment be positive, stimulation equipment can be provided to the patient, and they (or their carer) will be trained in its correct use.

Equipment provision and telephone support is supplemented by a regular programme of clinical reviews.

For the electrical stimulation (FES) assessments and reviews we use the techniques and / or tools outlined above as appropriate.

**KEY STAFF**

**HOW TO REFER**  
e-Referral or direct.

### Neuro community team (Wandsworth)

Based at St John’s Therapy Centre in Battersea, the WCNT is a specialist inter-disciplinary team offering neurological rehabilitation and disability management to people with an acquired neurological condition. The WCNT also offers early supported discharge (stroke only). We work mainly in patient’s homes (including nursing and residential homes), but can see people in any other suitable community setting, and as outpatients at either St John’s Therapy Centre or Queen Mary’s Hospital. Our intervention can be offered in a range of packages individually designed to meet each patient’s needs. We also have a range of group programmes.

**WHAT WE OFFER**  
- Physiotherapy  
- Occupational therapy  
- Speech and language therapy  
- Clinical neuropsychology  
- Dietitian  
- Clinical nurse specialist  
- Complex case manager  
- Rehabilitation and psychology assistants  
- Clinical team leader

**KEY STAFF**  
- Dr Paul Collinson  
- Fatima Fernandes

**SERVICE CONTACT DETAILS**  
- **St John’s Therapy Centre**  
  162 St John’s Hill  
  Battersea SW11 1SW  
  - **E:** stgh-tr.wandsworthcnt@nhs.net  
  - **T:** 020 8812 4060  
  - **F:** 020 8812 4059

**HOW TO REFER**  
Complete a WCNT/ESD referral form and email to **stgh-tr.wandsworthcnt@nhs.net** or fax it directly to the team on **020 8812 4059**. You can call the team to discuss the referral prior to completing the form on **020 8812 4060**. For complex discharges from hospital/rehab units, please refer the patients early. A team member can attend discharge planning meetings to support a smooth transition to the community. Neurological rehabilitation can be complex, so to aid and inform the team, please send as much relevant information as possible with the referral (e.g. discharge summaries, risk assessments, medical reports, test results etc). If the team do not have adequate or correct information this will lead to delays in a patient’s treatment.
Paediatric medicine (general paediatrics)

Key Staff

### Childhood Immunisation

**WHAT WE OFFER**

Day evening and Saturday clinic appointments for universal neonatal BCG and selective BCG ages 1-5 in venues across the borough. Also for follow up of missing immunisations and advice. Selective BCG clinics for children aged 6-15 years in the school holidays.

Evening and Saturday clinics for booked human Papilloma virus (HPV) and selective Hepatitis B appointments, evening and Saturday walk in clinics for final boosters, and any other missed childhood immunisations. The team also liaises with GP’s school nurses, health visitors, nursery nurses and looked after specialist nurses, Hepatitis B coordinators and practice nurses.

**Schools programme:**

HPV is offered to all 12-13 year old girls in both independent and state schools.

Final booster of Diphtheria Tetanus and Polio and Meningitis C and opportunistic MMR immunisation is offered only in state schools to 14-15 year olds.

There are school catch-up sessions for both programmes throughout the academic year to maximise uptake.

Community clinics offer another opportunity for those not seen in school.

Nasal flu will be offered annually to all year one and two primary school pupils in 2015-16 with a roll out programme scheduled in the coming years.

The specialist nurses offer up-to-date immunisation advice to both the general public and health professionals through a Monday - Friday helpline.

**KEY STAFF**

- The service comprises of a small team of specialist nurses and dedicated administrative staff.
- Linda Neal - team leader

- Children’s Continuing Care

**WHAT WE OFFER**

The Continuing Care Package will include:

- A clinical lead to organise, co-ordinate and implement the care package. The provision of appropriately trained staff to assist your family in caring for your child during agreed periods i.e. day / night.

- Healthcare provision reviewed on regular basis to either increase or decrease hours based on your child’s condition.

- The Wandsworth Children’s continuing Care Team will:
  - Liaise with parents in a timely manner regarding any aspects including rota’s and reviews of the current care package and level of support required.
  - Co-ordinate the health care of the child for the time they are there.
  - Provide direct nursing care as required.
  - Provide support in meeting the child’s social and emotional development.
  - Liaise with other healthcare professionals, and others involved in the child’s care and education.
  - Clean and check medical equipment supplied and maintain a safe working environment.
  - Plan rotas to provide care as agreed for the child and troubleshoot in the event of unforeseen circumstances.
  - To act as an advocate for the child in situations where parents/carers are not present.
  - Recruit, train and support new members of the team.
  - Complete all documentation relevant to the child’s health needs.
  - Attend all trust mandatory training and any other necessary training.
  - Ensure all policies and clinical guidelines are in place and are based on best clinical evidence and reviewed regularly.

SERVICE CONTACT DETAILS

- Balham Health Centre
  - T: 020 8812 6236
  - E: sickethal.balham@stgeorges.nhs.uk

How to refer

- Please refer to service contact details.
WHAT WE OFFER

- Neurological Rehabilitation: Includes assessment and goal orientated intervention
- Long Term Disability Management: (including vocational rehabilitation) packages vary depending on need and may or may not include the input of the complex case manager
- Early Supported Discharge: (stroke only) is an intensive (daily) rehabilitation service, with the primary aim of facilitating patients back into their own home from the acute hospital, and maximising independence as quickly as possible. Packages are usually of four - six week duration. Patients are referred directly from an Acute Stroke Unit and are usually seen by a member of the Team before they are discharged to discuss their individual goals and rehabilitation needs. Patients may also be supported by a care package if needed.
- WCNT interventions can include:
  - Direct intervention:
    - Assessment (physical, emotional, cognitive, psychological, functional/vocational, communication, swallowing, continence etc)
    - Advice, information and education
    - Rehabilitation (exercises, splinting, functional practice, communication, swallowing, cognitive therapy, vocational, continence, outdoor mobility etc)
    - Self management and group programmes
    - Emotional and psychological support
    - Health promotion (smoking cessation, sensible drinking, weight management, physical activity etc)
  - Secondary prevention advice
  - Indirect intervention:
    - Referral to other professionals and services (e.g. wheelchair service, social services, orthotics, spasticity management service, gait laboratory, hospice, safeguarding vulnerable adults etc)
    - Advice on, prescription or provision of equipment and adaptations (WCES)
    - Reports for consultants, social services, continuing care panel etc
    - Training carers
    - Supporting carers
    - Co-ordinating disability management packages
    - Creating management booklets, instruction sheets etc
- Non Client Intervention:
  - Education/training others
  - Promoting neuro rehab in Wandsworth Audit and Research

How to refer

Please refer to service contact details.

Continued...
**Health visiting**

**WHAT WE OFFER**
- Indirect service provision: Telephone advice and signposting
- Liaison with other agencies to facilitate the provision of appropriate and ‘seamless’ services
- Training pre-registration nursing students (adult and child branch)
- Training community specialist pathway students
- Mentoring newly qualified staff
- Preceptorship for new staff
- Health promotion advice and guidance to other agencies, including help and advice in the creation of health related policies
- Contribution to the identification of children’s special education needs

**Homeless, refugee and asylum seeker services**

**WHAT WE OFFER**
- Signposting of services: through direct contact with refugees and asylum seekers to help them receive the support and healthcare they require. Signposting by itself is inadequate for people presenting with difficulties posed by language, misunderstandings and mental health problems
- Health assessments of new referrals: This is necessary to identify health needs and to inform routes of referral on to appropriate mainstream health services
- Advocacy: Someone who goes with the client to help fill out forms or answer questions, or often to challenge or mediate with staff who are unaware of asylum seekers’ rights
- Working collaboratively: With health and social service professionals to facilitate access to the services that they provide, and to increase awareness of the problems facing refugees and asylum seekers amongst other healthcare agencies
- Families in temporary accommodation: Working with families that have a child protection plan in place. This involves offering support and healthcare advice to the family concerned, liaise with other professionals involved and following the requirements of the protection plan (e.g. frequency of contact with family)
- Working with families where there is a cause for concern. This involves duties broadly similar to those listed under child protection plans above
- New birth visits: These can reach the health visitor through a variety of routes, including Rifco, accommodation lists from L.B. Wandsworth housing, other health visitors and occasionally from the clients themselves
- Clinics: These take place regularly in the temporary accommodation hostels that the team covers in Wandsworth, and offer services such as child development checks, weaning and breast feeding advice and general healthcare advice in conjunction with the team’s community nursery nurse

**KEY STAFF**
- Malachy O’Hagan - team leader
- Dianne Vigilance - lead for homeless families
- Vacant - lead for asylum seekers
- Mr Morgan McShane - team administrator
- Nursery nurse
- Health advocate

**WHAT WE OFFER**

- **Community clinics:** These are offered at a variety of sites around Wandsworth and provide routine podiatric treatments including callus and corn treatments, foot care and diabetic advice, verrucae treatments, wound care, simple biomechanics. They will also refer on to our specialist services if further investigation is required.

- **Home visits:** These appointments are only arranged for patients who are house-bound. At the initial appointment, each patient will undergo a mobility assessment. Appropriate transport can be provided for those patients who are able to attend clinic, but have restricted mobility.

- **Nail surgery:** These clinics involve the removal of part or all, of the affected in-growing toe nail, under a local anaesthetic.

- **Biomechanics:** Our biomechanics clinic is based at St John’s therapy centre and deals with musculo-skeletal problems that affect function and gait.

- **Diabetic ulcer clinic:** Our diabetes clinic (Beta Cell) at Queen Mary’s Hospital deals with patients with complex diabetic needs and ulceration.

- **Podiatry surgery:** The work of a podiatric surgeon encompasses surgical and non-surgical treatment of the foot and all related structures.

- Annie Barrett - school nurse (Greenmead School and Oak lodge School)
- Mala Mumah - school nurse (paddock Primary, little and Secondary Schools and Garrett Park School)
- Martha Poku - agency school nurse (Pupil referral units, Nightingale School and Youth offending team)
- Elaine Hurd - healthcare assistant (Greenmead School, Oak lodge School and Paddock Secondary) and Assessor for Continence service
- Mullannie Poleon - team administrator based at St John's therapy centre and Linden Lodge School

**SERVICE CONTACT DETAILS**
- Mullannie Poleon: 077 9545 0796
- Mark Hogan: 077 9580 0126

---

### Telehealth

**WHAT WE OFFER**
- Remote monitoring of patients recordings around a set of individualised parameters to assist in self-management and closer symptom monitoring of patients with a high risk of decompensation
- Installation and maintenance of equipment

**KEY STAFF**
- Community Heart Failure Specialist Nurses within Community Adult Health Services

**SERVICE CONTACT DETAILS**
- For specific heart failure and respiratory patient issues please refer to Community Adult Health Services

---

### Therapies for children in special schools

**WHAT WE OFFER**
- We provide intervention for children as part of the team within the school. Children's needs are reviewed regularly and at least at their annual review. Intervention focuses on supporting each child in their class and school, in order to maximise the learning potential and to maximise on the effectiveness of therapy input. Therapists and teaching staff work closely together with children and their families to set goals, provide intervention and support and to review progress. Therapy goals are jointly set and incorporated into classroom activities

**KEY STAFF**
- Robert Young - professional lead (SLT)
- Hannah Coultan - professional lead (PT)
- Lesley Smith - professional lead (OT)
- Robert Young - clinical team leader
- Tessa Ross - therapies coordinator - Linden Lodge School

**SERVICE CONTACT DETAILS**
- Clinical team leader: Robert Young
- Special Schools Therapies Queen Mary's Hospital Roehampton Lane London SW15 5PN
- 020 8487 6352 / 6356
- 077 4893 2877
- robert.young@stgeorges.nhs.uk

---

**HOW TO REFER**
- Please contact either Mullannie Poleon or Mark Hogan as per service contact details.
## WHAT WE OFFER

Service users are individually assessed for equipment by health and social care staff members using the WICES assessment which records the clinical reasoning behind the prescription of any particular piece of equipment.

The provision of equipment is integral within assessment, treatment planning and care planning.

Equipment once prescribed and ordered can be delivered on the following schedule:
- Standard (up to 5 days delivery)
- Next day
- Same day (within office hours)
- Emergency (out of hours)

Some equipment is available for the patient/carer to collect from their local pharmacy via the prescription model of equipment provision. This allows patients to “top up” their prescription for a different model of equipment which may be more pleasing to them.

## KEY STAFF

- Noyola McNicolls-Washington - Head of nursing for community adult health services and lead for WICES
  - T: 020 8812 5000
  - E: noyola.mcnicolls-washington@stgeorges.nhs.uk

## SERVICE CONTACT DETAILS

  - W: www.wandsworth.gov.org
  - T: 020 8871 6000

- For equipment requests, please contact Noyola McNicolls-Washington for referral details.
Section 6: South West London Pathology A-Z

Based at:
St George’s Hospital
Blackshaw Road
Tooting
London SW17 0QT

St George’s University Hospitals NHS Foundation Trust
2017
The pathology department at St George’s Hospital is part of South West London Pathology (SWLP) which is an NHS partnership set up by St George’s University Hospitals NHS Foundation Trust, Croydon Health Services NHS Trust and Kingston Hospital NHS Foundation Trust to provide a single, high quality, integrated pathology service across South West London and beyond.

Providing core and specialist services:
We provide an extensive repertoire of tests as well as a comprehensive set of specialist tests and services. We provide an efficient service that is high in quality and value for money.

Expert clinical advice:
We offer a wide range of diagnostic and clinical support services with clinical and interpretative advice to healthcare professionals.

State of the art laboratories:
All our laboratories use state-of-the-art, cutting edge technology and are supported by an integrated IT network.

Our ‘hub’ laboratories are based at St George’s where the majority of pathology samples are processed. We have two fully automated ‘spoke’ local laboratories based at Croydon University Hospital and Kingston Hospital which handle urgent work from A&E, acute wards, theatres and maternity services.

Our specialities:
South West London Pathology is comprised of three specialities that carry out laboratory testing:

- Clinical Blood Sciences (incorporating Chemical Biochemistry, Haematology, Blood Transfusion and Immunology/Protein Reference Unit)
- Cellular Pathology (incorporating Histopathology, Cervical Cytology Screening and Diagnostic Cytology)
- Medical Microbiology
The pathology department at St George’s Hospital is now part of South West London Pathology (SWLP) which is an NHS partnership between St George’s University Hospitals NHS Foundation Trust, Croydon Health Services NHS Trust and Kingston Hospital NHS Foundation Trust to provide a single, high quality, integrated pathology service across South West London and beyond. SWLP brings together the best of each Trust’s service and provides them within a single organisation.

South West London Pathology provides a comprehensive and extensive service to St George’s Hospital, CCGs and referring hospitals. The service has excellent links with all specialities within each trust and offers a full and extensive range of diagnostic testing as well as providing appropriate and comprehensive explanations of results to healthcare professionals.

South West London Pathology uses a ‘hub and spoke’ delivery model with the main ‘hub’ laboratory based at St George’s Hospital with ‘spoke’ local laboratories at Croydon and Kingston to manage urgent local work (emergency department, acute wards, theatres and maternity services).

South West London Pathology is comprised of three specialities that carry out laboratory testing:

- **Clinical Blood Sciences** (incorporating Clinical Biochemistry, Haematology, Blood Transfusion and Immunology / Protein Reference Unit)

- **Medical Microbiology**

- **Cellular Pathology** (incorporating Histopathology, Cervical Cytology Screening and Diagnostic Cytology)
