

A&E Clinical Quality Indicators

Overview

This dashboard presents a comprehensive and balanced view of the care delivered by our A&E department, and reflects the experience and safety of our patients and the effectiveness of the care they receive. These indicators will support patient

General Information

St George's Hospital NHS Trust
 Type 1 (Major)
 Published for Nov-2012

Summary of performance - November 2012

Ambulatory Care

Definition of indicator

Ambulatory care sensitive conditions: the number of admissions for cellulitis and deep vein thrombosis (DVT) per head of weighted population.

Ambulatory care for emergency conditions: the percentage of A&E attendances for cellulitis and deep vein thrombosis (DVT) that end in admission

This presents the percentage of attendances for cellulitis and deep vein thrombosis (DVT) that were admitted to the hospital.

This measure is recorded quarterly. Next upload June 2012

Narrative

Throughout 2011/12 and the first 2 quarters of 2012/13 the admission rates for cellulitis and DVT have been below the national target of 10%.

Total time spent in the A&E Department (Admitted)

Definition of indicator

The median, 95th percentile and longest total time spent by patients in the A&E department, for admitted and non-admitted patients
The national target for the median wait is 240minutes. This measure is monitored monthly

Narrative

A breakdown of November 2012 data is below

Median wait – 226 minutes

95th percentile – 434 minutes

Single longest wait - 1006 minutes. This because it was clinically necessary to keep patients within the department

Left Without Being Seen

Definition of indicator
 The percentage of people who leave the A&E department without being seen.
 National target is less than 5%
 This measure is reported monthly

Narrative

Throughout 2011/12, the number of patients was consistently less than the national target. For November 2012 the figure was 3.1%.

Service Experience

Definition of indicator

Narrative description of what has been done to assess the experience of patients using A&E services and their carers, what the results were, and what has been done to improve services in light of the results
This measure is reported quarterly

Answer	Total	Answer	Total	Answer	Total	Answer	Total	Answer	Total
Female	7	81 +	3	White British	6	Excellent	6	Within 10 minutes	8
Male	3	36 to 50	1	Other White	1	Fair	1	Within 30 minutes	2
		0 to 18	1	Other Asian	3	I didn't see the receptionist	3		
		66 to 80	3						
		51 to 65	1						
		26 to 35	1						

Narrative

The Patient Experience Tracker (PET) questionnaire is used to ask patients to reflect on their experience of the A&E department including the environment, staff, and whether they were involved in the decisions made regarding their care. The results are reviewed and discussed at the A&E Patient Experience Focus Group on a monthly basis and actions taken to address issues.

Time to Initial Assessment

Definition of indicator

The time from arrival to start of full assessment, which includes a pain score and early warning score, for all patients presenting by ambulance. The national target is 15 minutes. This measure is reported on monthly.

Narrative

A median wait of zero minutes against target is recorded for November. Ambulance triage moved to the front of the A&E Department from the 12 May 2012, this ensures that all observations are carried out on the patients arrival to the hospital.

Compared to last month

Time to Treatment in A&E

Description of data

The time to treatment relates to the time in minutes that patients wait to be seen by a member of the clinical team who is able to diagnose and make an initial plan of treatment for them. This should be no longer than 60 minutes from initial registration. This measure is reported monthly

Narrative

A breakdown of November's performance is below:-

Median wait – 41 minutes

Max wait – 374 minutes

95th percentile – 141 minutes

* consultant, associate specialist, staff grade, specialty doctor, senior clinical fellow, or ST4-7+

Chart 2: Percentages of all audited patients seen ...
... by a consultant or associate specialist

... by a doctor of seniority ST4 or above*

Definition of indicator

The percentage of patients presenting at type 1 and 2 (major) A&E departments in certain high-risk patient groups (adults with non-traumatic chest pain, febrile children less than 1 year old and patients making an unscheduled return visit with the same condition within 72 hours of discharge) who are reviewed by an emergency medicine consultant before being discharged. This measure is monitored six monthly

Narrative

Percentage of all audited patients signed off by consultant = 40% (nationally = 22%)

Percentage of all audited patients signed off by Consultant (or ST4 and above if consultant not immediately available = 76% (nationally = 71%))

SGH total of 76% percentage of patients signed off by a consultant
