

Paediatric urodynamic test

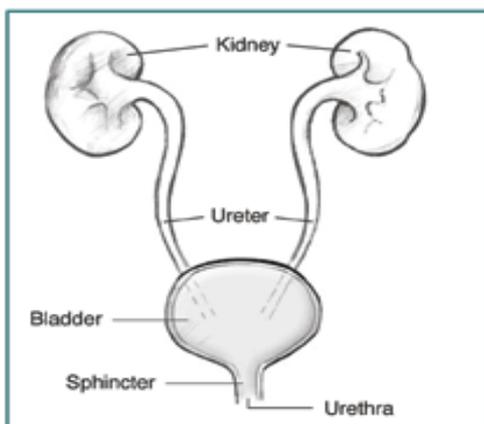

This leaflet explains more about paediatric urodynamics tests, including the benefits, risks and any alternatives and what you can expect when you come to hospital.

If you have any further questions, please speak to a doctor or nurse caring for you.

What is a paediatric urodynamics test?

This is a test to see:

- how much urine (wee) your bladder holds
- how your bladder is working
- any changes to your bladder
- if you need any medicine to help you go to the toilet better.

How do I get ready for my urodynamics test?

You will need to come to Jungle ward.

You will need to have two lines put in (but no needles) - one for your bladder and one for your bottom. You will also have a urine bag.

Some children have the lines put in while having a quick sleep with medicine. If you are used to having catheters done at home you will have them put in while you are awake on the ward.

Ask your parent or carer how you will have yours put in.

The lines will feel strange to start with but you'll soon forget about them. The lines and bag are hidden away so no one can see them.

There are toys and games to play with on Jungle ward and you can also bring your own things with you.

You will be given a wheelchair to help you move around and stay comfortable.

What will happen during my urodynamics test?

After lunch you will go and have your urodynamics test.

You will be asked to lay very still on a special moving bed with a camera. The camera will move but won't touch you.

You can play a game or watch a film while the lines in your bladder and bottom will be attached to a computer.

Sterile water will then be put through the lines into your bladder. This won't hurt but may feel cold.

Your parent or carer will be with you all through the test, which will last about 30 minutes.

At the end, the lines will be taken out and you will go back to the ward or go home.

Will I have any other tests as well?

While you are in hospital you may also need to have these tests:

- an ultra sound to look at your kidneys (jelly on the belly)
- another kidney test called GFR.

You can ask your nurse or the play specialist if you will be having either of these.
