

Transition from Paediatric Epilepsy services to Adult Epilepsy Neurology services

This leaflet gives information for young people and their families about the transition to Adult Epilepsy Neurology services. If you have any further questions, please speak to a doctor or nurse caring for you.

Introduction

Transitioning from paediatric to adult services can be a stressful and scary time for a young person and their family. This leaflet is designed to provide some information about that process and the practicalities surrounding the transition.

Frequently Asked Questions

Why does the young person need to transition?

When a young person reaches the age of 18, they are legally recognised as an adult. Paediatricians manage children up to this age but once a young person is an adult, the adult specialist doctors take over. The transition process is started between the ages of 14-16 years. We aim for young people with epilepsy and no learning disability to transition by the age of 16 years, and by the age of 18 years if they have a learning disability.

Who are the specialists taking over the care of the young person?

The medical team will be the adult neurology doctors specialising in epilepsy. Several years of training and experience are required for doctors working in this area. Sometimes a Consultant Psychiatrist specialising in Learning Disability and a specialist mental health nurse also attend the epilepsy transition clinic.

Will the new team know my child's background?

We make every effort to make communication as smooth as possible. A formal referral letter is sent by the paediatric team to the adult team prior to the transition clinic. The electronic and or paper notes are usually available to both teams but often the parents/guardian and the young person themselves are the most valuable sources of information.

Is this transition process the same for all specialities like gastroenterology or respiratory?

No. This transition process is only for epilepsy. Any other medical teams involved in the young person's care will have a separate but similar transition process.

What happens in the case of an emergency?

Once seen and discussed at the transition clinic, the young person should either contact their GP or attend Adult Accident and Emergency (A&E). Prior to this, the young person should attend Paediatric A&E as usual.

What happens on admission to hospital?

Any admissions to hospital after transition will be to an adult ward.

Practical information

Name of "new" adult clinic once transition is complete

Epilepsy clinic

Location of "new" adult clinic

Neurology Outpatients, Ground Floor, Atkinson Morley Wing, St George's Hospital.

Adult neurology (epilepsy) team members

Professor Hannah Cock– Consultant Neurologist

Dr Dora Lozsadi– Consultant Neurologist

Dr Marco Mula– Consultant Neurologist

Ms Loraine Bowler– Clinical Nurse Specialist

Mr Paul Turner– Clinical Nurse Specialist
