

Information for Parents or Carers:

Why is my daughter being asked if she might be pregnant?

This leaflet explains why your daughter is being asked if she might be pregnant and why we routinely undertake pregnancy testing in girls who have started their periods or who are aged 12 years or over.

If you have any further questions, please speak to a doctor, nurse or radiographer caring for you.

Why am I being asked if my daughter might be pregnant?

When anyone comes into hospital we ask them questions about their health, any medicines they are taking and any allergies they may have. This is so that we can ensure their safety whilst they are in hospital. We also need to be sure that your daughter is not pregnant as having an anaesthetic, chemotherapy or an x-ray whilst pregnant carries some risks.

Girls under the age of 16 do get pregnant. We understand that most teenage girls are not having sex, so it is not possible for them to be pregnant. We do not know who is and who isn't sexually active, so to ensure we care for your daughter safely we ask you and her if she might be pregnant and if we can undertake a pregnancy test.

What are the risks?

Even within 8 weeks of becoming pregnant there are many changes that happen within the body. How drugs affect the body and how the body deals with them can be different during pregnancy. Some drugs that we use during anaesthesia (when someone is put to sleep during an operation) may damage an unborn baby and are best avoided. There is also a chance of miscarriage (losing the baby) if they have an operation, chemotherapy or an x-ray during the early weeks of pregnancy.

Will my daughter have to have a pregnancy test?

All girls who have started their periods, or who are aged 12 years or older will be asked to provide a sample of urine for a pregnancy test. Although there may be a small number of pregnancies in this age group, we believe that, testing all girls is the most effective way of avoiding the risk of harm. This is based on national guidance,

For most girls the test will be negative showing that they are not pregnant and her operation, test or treatment will go ahead as planned. For a small number of young people the test may be positive and we would then have to think very carefully about the best way to proceed and to make sure that the right care is organised to help them with her pregnancy.

You and your daughter have a right to refuse a pregnancy test but we would want to discuss with you the reasons why in order to help us to make the best decisions on how to proceed with your daughter's care and keep her safe.

Who will ask me?

The doctor, nurse or radiographer will discuss this with you and your daughter. Your daughter will be asked to provide a urine specimen which will be tested in the clinic room in the ward or department. If you or your daughter would like further information, please let the doctor, nurse or radiographer know.
