

Paediatric Bladder Scan and UroFlow Test

An Information leaflet for patients

This leaflet explains more about Bladder Scan and UroFlow, including the benefits, risks and any alternatives and what you can expect when you come to hospital.

If you have any further questions, please speak to a doctor or nurse caring for you.

What are a Bladder Scan and UroFlow?

The Bladder and UroFlow are two short pain-free, non-invasive, tests to assess how well your child's bladder is functioning. These are non-invasive procedures and are not the same as urodynamics.

Why should have a Bladder Scan and UroFlow Test?

Following a recent appointment with your child's consultant, your child's name has been added to the waiting list for Bladder Scan and UroFlow. This assessment will enable either the Nurse Specialist or the consultant to advise you on ways to improve your/your child's bladder function.

Where will I have to go for the Bladder Scan and UroFlow?

The procedure takes place on a Friday or Saturday (occasionally there will be other days too). The whole procedure takes around one hour but in some cases may take the whole morning.

Please report to Nicholls Ward, 5th floor Lanesborough Wing.

How can I prepare for the Bladder Scan and UroFlow?

We ask that you arrive promptly and that your child has had a large drink, preferably prior to arriving as the scan necessitates your child to have a full bladder, or has one when you arrive at the hospital. Your child will be seen promptly so please do not allow them to go to the toilet. If you arrive late you may not be seen and may have to be rebooked as a late arrival impacts on the next patient's care.

If you or your child are anxious about having to arrive with a full bladder, we suggest you arrive early for the appointment to give you time to fill your bladder while at the hospital.

Asking for your consent

It is important that you feel involved in decisions about your care. For some treatments, you will be asked to sign a consent form to say that you agree to have the treatment and understand what it involves. You can withdraw your consent at any time, even if you have said 'yes' previously. If you would like more details about our consent process, please ask for a copy of our policy.

What happens during the Bladder Scan and UroFlow?

The Bladder scan involves the tummy being covered in 'jelly'. A scanner probe slides over the

tummy. This does not hurt and should not alarm your child. The probe does not go inside your child.

The nurse specialist will ask your child if they are able to pass urine in a special toilet. This is done in privacy, with only the parent present, if the child wishes to be with them.

The nurse specialist will then re-scan the tummy to ensure that the bladder is empty. If the bladder is not empty the scan can determine how much urine is remaining.

Will I feel any pain?

Both of these tests are pain-free, the 'jelly' on the belly may be a little cold but that is all.

Will I have a follow-up appointment?

The results of the test will be sent to your consultant and these will be discussed in your next appointment. If you do not have an appointment then one will be organised for you and will be sent out to you in the post.

Contact us

If you have any questions or concerns about Bladder Scan and UroFlow, please contact the paediatric continence team on 020 8725 2272/2454 (Monday to Friday, 9am to 5pm) or email us on Paediatric.continence@stgeorges.nhs.uk
