

# Speech and Language Therapy for Motor Neuron Disease

**This leaflet explains more about Speech and Language Therapy for Motor Neuron disease. If you have any further questions, please speak to a staff member caring for you.**

Up to 80% of people with Motor Neuron disease (MND) report difficulties with their communication and up to 81% of people report changes to their swallowing. Many people with Motor Neuron disease also develop problems controlling their saliva.

In some individuals with Motor Neuron disease, voice, speech and swallow changes can be the very first symptom. For others, these changes may happen later in the disease progression or not at all. In some instances, changes to communication or swallowing can be subtle, meaning they may not be noticed by the individual. Sometimes family members are the first ones to recognise changes to communication or swallowing.

This leaflet aims to supply quick and helpful information about communication and swallow change related to Motor Neuron disease as well as some practical tips and advice.

## Communication Changes in Motor Neuron Disease

Communication changes in Motor Neuron disease generally happen because of weakness, wasting or spasticity of the muscles used for speech. Other communication issues in people with Motor Neuron disease are linked to the way you think.

### Signs to look out for:

- Slurred or slow speech or sounding as if you are drunk
- Weak or 'soft' sounding speech or needing to repeat yourself
- Hoarse or rough sounding voice
- The appearance of speaking through the nose
- Running out of breath when speaking
- Difficulty finding the words, 'getting them out' or saying the wrong words
- Forgetting what you were trying to say or losing your train of thought.

### What you can do:

- Avoid background noise when communicating
- Make sure you are facing the listener
- Speak more slowly
- Pause to take breaths between words and sentences
- Over emphasise words and break them into distinct syllables
- Save energy by using short sentences and giving yourself breaks from communicating with others throughout the day.
- Try using gestures to emphasise or replace speech

- Try making a list of regular questions and requests so your family and friends can go through the list and you indicate yes or no by an agreed signal.

## Swallowing Changes in Motor Neuron disease

The term used for swallowing difficulties is dysphagia. Dysphagia in people with Motor Neuron disease typically occurs due to changes in the muscles used to chew and swallow, such as the lips, tongue and throat. This means eating and drinking safely may become more difficult.

Treating swallowing difficulties is vital to prevent serious problems such as aspiration (i.e. food going down the wind pipe to the lungs, which can lead to chest infections) and choking.

### Signs to look out for:

- Difficulty chewing food and keeping food in your mouth
- Coughing or choking during or shortly after eating or drinking
- Food and drink going down the wrong way
- Food or drink getting stuck in your throat
- A wet or 'gurgly' voice after eating and/or drinking
- Changes in breath patterns or difficulty breathing when eating and/or drinking
- Food remaining in your mouth after swallowing
- Loss of appetite, taking longer to finish meals or feeling tired when eating and drinking
- Unintentional weight loss
- Recurrent chest infection (this means the food or drink may have reached the lungs as opposed to the stomach)
- Drooling / dribbling / excess saliva in the mouth.

### What you can do:

- Sit as upright as possible when eating and drinking, ideally in a chair
- Reduce distractions during mealtimes, such as TV or radio
- Try to take small mouthfuls and sips and take your time when eating and drinking
- Avoid taking another mouthful until you're sure you've cleared your mouth and throat
- Refill your cup or glass when it's half empty, so you don't have to tilt your head back to drink, which can cause food or drink to go down the wrong way
- Chew food carefully and then swallow deliberately
- If you feel there is food stuck in your throat, swallow again or take a sip of fluid.

### How can a Speech and Language Therapist help?

Following your admission to hospital, you may have already have been seen by a Speech and Language Therapist and / or have been referred on to see one in the community setting. If you have not and you are concerned about your communication or swallowing, you should first talk with your doctor. He or she will be able to refer you to a Speech and Language Therapist if appropriate. If the problem is urgent, call 111 or 999.

Speech and Language Therapists can provide support for both communication and swallow changes in people with Motor Neuron disease. They can uncover any issues and help you to manage them.

For more information leaflets on conditions, procedures, treatments and services offered at our hospitals, please visit [www.stgeorges.nhs.uk](http://www.stgeorges.nhs.uk)

## Useful Contact Details

### MND Association:

Tel: 01604 250505

Website: [www.mndassociation.org](http://www.mndassociation.org)

Email: [enquiries@mndassociation.org](mailto:enquiries@mndassociation.org)

## Additional services

### Patient Advice and Liaison Service (PALS)

PALS can offer you on-the-spot advice and information when you have comments or concerns about our services or the care you have received. You can visit the PALS office between 9.30am and 4.30pm, Monday to Friday in the main corridor between Grosvenor and Lanesborough wings (near the lift foyer).

**Tel:** 020 8725 2453 **Email:** [pals@stgeorges.nhs.uk](mailto:pals@stgeorges.nhs.uk)

### NHS Choices

NHS Choices provides online information and guidance on all aspects of health and healthcare, to help you make decisions about your health.

**Web:** [www.nhs.uk](http://www.nhs.uk)

### NHS 111

You can call 111 when you need medical help fast but it's not a 999 emergency. NHS 111 is available 24 hours a day, 365 days a year. Calls are free from landlines and mobile phones.

**Tel:** 111

### AccessAble

You can download accessibility guides for all of our services by searching 'St George's Hospital' on the AccessAble website ([www.accessable.co.uk](http://www.accessable.co.uk)).

The guides are designed to ensure everyone – including those with accessibility needs – can access our hospital and community sites with confidence.
