

Thumb Exercises

This leaflet offers more information about exercises to help reduce stiffness and increase the range of movement of your thumb. If you have any further questions or concerns, please speak to the staff member in charge of your care.

You may find your joints and muscles feel stiff or painful to begin with, but as you continue with the exercises this should improve.

Your therapist will let you know if you should do these exercises:

-  **passively** – where you push your thumb into a position with your other hand
- or
-  **actively** – where you use your thumb muscles on their own.
-  These exercises should be done times during the day
-  You should hold each position for seconds

1. Stretch and bend

- a) Keeping your hand flat, stretch your thumb away from your fingers as far as possible and hold.
- b) Then bend it as much as you can over towards the base of your little finger, hold then relax.

Repeat

times **passively / actively**

2. Tip to tip

- a) Starting with your first (index) finger, touch each fingertip in turn with the tip of your thumb, trying to make an 'O' shape.
- b) When you reach the little finger, run your thumb down to the base of the little finger.

Repeat

times **passively / actively**

3. Adduction (together)/ Abduction (spread apart)

- a) Push your thumb against your index finger and hold.
- b) Then stretch your thumb away from your index finger (as if going to pick up a glass), hold then relax.

Repeat times **passively / actively**

Contact us

If you have any questions or concerns about your thumb exercises, please talk to your therapist at your next appointment. For urgent questions, contact the hand therapy team on 020 8725 1038 (answerphone, please leave a message). For appointments contact 020 8725 0007.

Your therapist's name is _____
