

# Endoscopic (Telescopic) Treatment of a Urethral Stricture consent form

This form should only be used if the patient has capacity to give consent. If support is required with consent (interpreter, witness, carer, guardian, parent, or any other relevant support) please ensure they are present. If the patient does not legally have capacity, please use an appropriate alternative consent form from your hospital or hub. This form will be the result of a shared decision conversation between a clinician and patient. "You / your / me / my" hereby refers to the patient.

Please note it is common NHS practice for your consent to be taken by a clinician other than the operating or listing surgeon. This clinician will be suitably trained and competent to take consent. They will be referred to as the "responsible healthcare professional" in this form.

You will be provided with additional patient information about your procedure by your hospital or hub site. These will be provided in a language and format that suits you.

You may have questions before starting, during or after your procedure. Contact details are provided for any further queries, concerns or if you would like to discuss your treatment further. The risks quoted in this consent form for surgery assume that you have no additional factors which would increase your risk. The clinician discussing the consent with you will explain if you have health conditions or factors that may increase your risk.

## Details of Endoscopic (Telescopic) Treatment of a Urethral Stricture

**Endoscopic (Telescopic) treatment of an urethral stricture Procedure:**

This procedure involves: Endoscopic (keyhole) procedures do not involve any cuts in the skin. They are performed as a day case and may require temporary bladder catheterization for a few days afterwards, and you may need to learn to dilate (stretch) your own urethra with a catheter after the procedure. The scar tissue in the urethra may be cut and / or stretched and dilated during this treatment.

**Extra procedures:**  
(Tick as appropriate)

- Bladder biopsy if abnormal area seen in bladder.
- Fragmentation of bladder stone if present
- Other(s) \_\_\_\_\_

**Indication for, and purpose of surgery / benefits:**

(Tick as appropriate)

- To treat urethral stricture disease to help you to pass urine more easily
- Other(s) \_\_\_\_\_

**Alternatives considered:**

(Tick as appropriate)

- Observation** Doing nothing, this may result in bladder or kidney damage.
- Suprapubic catheter insertion** Inserting a tube through your abdomen to drain your bladder.
- Open Surgery** Reconstructive surgery (i.e. urethroplasty or meatoplasty).
- Other(s) \_\_\_\_\_

## Possible early or short-term risks

### Uncommon

Unlikely to happen  
(fewer than 1 in 20)

**Damage** Damage to the urethra resulting in a 'false passage' requiring further surgery or insertion of a suprapubic catheter.

## Possible late or long-term risks

### Expected

Will probably happen

**Burning sensation** Temporary burning and stinging when you pass urine (which may last for a week or so).

**Bleeding in urine** Temporary bleeding in your urine (which may last for a week or so).

### Common

Might happen  
(more than 1 in 20)

**Urinary tract infection** Urinary tract infection requiring treatment with antibiotics.

**Recurrence of the Stricture** Recurrence of the stricture requiring repeat or alternative treatment.

### Rare

Probably won't happen  
(fewer than 1 in 100)

**Bleeding** Delayed bleeding requiring removal of clots or further surgery.

**Abscess** Infection around the urethra resulting in formation of an abscess.

**Quality of erections** Decrease in the quality of erections requiring treatment.

**Penile Bending** Bending on erection due to formation of scar tissue.

## Statement of healthcare professional

(to be filled in by health professional with appropriate knowledge of proposed procedure)

- I am suitably trained and competent and have sufficient knowledge to consent this patient in line with the requirements of my regulatory body.
- I have discussed what the treatment is likely to involve, the benefits and risks of this procedure.
- I have discussed the benefits and risks of any available alternative procedures or treatments including no treatment.
- I have considered any additional patient-specific factors and discussed these with the patient alongside their particular concerns.
- I can confirm that the patient has the capacity to give consent.

## Statement of patient

**Please read this form carefully. If you have any further questions, do ask – we are here to help you. You have the right to change your mind at any time, including after you have signed this form.**

**You must consent to the following section to proceed with your surgery:**

- I confirm that I have read and understood pages 1 to 5 of the consent form.
- I understand the diagnosis and agree with the course of treatment described on this form.
- I have had the opportunity to discuss treatment alternatives, including no treatment.
- I have had the purpose, aims and possible risks of treatment explained to me.
- I understand that the operating person, who will have appropriate expertise to carry out the procedure, may not have been involved in my pre-operative assessment or care to date.
- I understand my anaesthetic options will be or have been discussed with an

anaesthetist where we will jointly decide which option is best for me. I understand that the type of anaesthesia may need to be altered if there are any complications during the procedure.

- I have been told about additional procedures which are necessary prior to treatment or may become necessary during my treatment. This may include permanent skin marks, photographs, and / or tissue samples to help with treatment planning and identification.
- I understand that any procedure in addition to those described on this form will only be carried out if it is necessary to save my life or to prevent serious harm to my health. I have spoken to my health care professional about any lifesaving procedures I do not wish to happen.
- I understand that relevant and appropriate patient specific data for this procedure will be collected and may be used in the context of providing clinical care, and/or audit purposes in compliance with Data Protection Act (2018).

**Additional Consent: This section will not stop you from receiving surgery but will help with future learning and training. Please tick if you consent:**

- I understand that there may be health care professionals that are training during my procedures such as medical students, and trainee nurses. I consent that they may participate in examinations relevant to my procedure, supervised by a fully qualified professional.

- I understand that information collected during my procedure including images, may be used for education and research (which may be published in medical journals). All information will be anonymised and used in a way that I cannot be identified.
- I agree that my health records may be used by authorised members of staff, who are not directly involved in my clinical care, for research approved by a research ethics committee and in compliance with the Data Protection Act (2018).

Tick if relevant:  I confirm that there is no risk that I could be pregnant.

## Anaesthesia

Anaesthetic is used to allow surgery to take place painlessly. It may include medicines which put you to sleep or those which only numb the area you are having operated on while you remain awake. This can be done in a variety of ways and your anaesthetist will advise you on your options and talk to you about the risks, complications, and benefits of types of anaesthetic. If there are particular anaesthetic risks/concerns for any particular patient these should be separately documented in the patient's records.

Anaesthetic options and risks will be discussed with you on the day of surgery with an anaesthetist. This is a shared decision-making process, and you will jointly decide and agree which anaesthetic option is best for you. Please remember that if there are any complications during surgery, your anaesthetist may need to alter the type of anaesthesia and will explain this to you before the procedure.

For further information about the types of anaesthetic you may receive, and potential risks please see information below.
