

Ureteroscopy (Telescopic Surgery) for Stone Removal consent form

This form should only be used if the patient has capacity to give consent. If support is required with consent (interpreter, witness, carer, guardian, parent, or any other relevant support) please ensure they are present. If the patient does not legally have capacity, please use an appropriate alternative consent form from your hospital or hub. This form will be the result of a shared decision conversation between a clinician and patient. "You / your / me / my" hereby refers to the patient.

Please note it is common NHS practice for your consent to be taken by a clinician other than the operating or listing surgeon. This clinician will be suitably trained and competent to take consent. They will be referred to as the "responsible healthcare professional" in this form.

You will be provided with additional patient information about your procedure by your hospital or hub site. These will be provided in a language and format that suits you.

You may have questions before starting, during or after your procedure. Contact details are provided for any further queries, concerns or if you would like to discuss your treatment further. The risks quoted in this consent form for surgery assume that you have no additional factors which would increase your risk. The clinician discussing the consent with you will explain if you have health conditions or factors that may increase your risk.

Details of Ureteroscopy (Telescopic Surgery) for Stone Removal

Ureteroscopy (Telescopic Surgery) for Stone Removal Surgery Procedure:

The aim of this procedure is to fragment stones in the ureter (the tube that drains urine from the kidney into the bladder) or kidney, using a thin telescope passed into the bladder through the urethra (waterpipe). We use a "semi-rigid" telescope (ureteroscope) for stones in the ureter and a flexible ureteroscope to treat stones in the kidney. We use x-rays during your operation to guide us and to try and ensure all your stones are found.

Extra procedures: (Tick as appropriate)

+/- biopsy +/- ureteric stent insertion

Site and side: (Tick as appropriate)

Left Right

Indication for, and purpose of surgery / benefits: (Tick as appropriate)

To break up and remove stones in the kidney and ureter to prevent blockage and treat pain.
 Other(s) _____

Alternatives considered: (Tick as appropriate)

- Observation** – most stones smaller than 5mm in diameter pass by themselves but larger stones (greater than 7mm diameter) rarely do.
- Extracorporeal shockwave lithotripsy (ESWL)** – this involves using a machine that generates shock waves which travel through your skin to break the stone into fragments which you then pass yourself.
- Antegrade ureteroscopy** – stones in the upper ureter (close to the kidney) can be treated by percutaneous (keyhole) puncture of the kidney so that a ureteroscope can be passed down to the stone from above.
- Laparoscopic (Keyhole) or robotic stone removal** – for extremely large or impacted stones in the ureter.
- Percutaneous nephrolithotomy (PCNL)** – for large stones in the kidney which may not be suitable for flexible ureteroscopy.
- Open stone removal** – although very unusual nowadays, if all the above techniques fail we may need to resort to open surgery, through an incision in your side, to remove your stone(s).
- Other(s) _____

Possible early or short-term risks

Expected

Will probably happen

**Ureteric Stent**

Temporary insertion of a ureteric stent which needs to be removed later. Ureteric stents can often irritate the bladder, causing discomfort, a sensation of needing to pass urine frequently and can cause blood in the urine.

UncommonUnlikely to happen
(fewer than 1 in 20)**Failure to access the ureter**

Failed to access the ureter (or reach the stone) requiring further surgery or other treatment.

Catheter

Temporary insertion of a bladder catheter.

RareProbably won't happen
(fewer than 1 in 100)**Minor damage to ureter**

Minor damage to the wall of the ureter (small perforation, mucosal abrasion, bleeding) requiring stenting or percutaneous nephrostomy.

Major damage to ureter

Major damage to the wall of the ureter (large perforation, avulsion of the ureter) requiring further surgery.

Possible late or long-term risks

Expected

Will probably happen

**Discomfort**

Mild burning or bleeding on passing urine for a short time after the procedure (especially if you have a ureteric stent).

CommonMight happen
(more than 1 in 20)**Recurrence**

Recurrent (new) stone formation over the next five to 10 years, requiring further surgery or other treatment.

UncommonUnlikely to happen
(fewer than 1 in 20)**Further Procedure**

Residual stones requiring further surgery or other treatment (more likely for stones closer to the kidney).

Urinary Tract Infection

Infection requiring antibiotic treatment.

RareProbably won't happen
(fewer than 1 in 100)**Narrowing of the ureter**

Narrowing of the ureter due to delayed scar formation (stricture) which may require further treatment.

Patient specific risks

Patient
Specific Risks

Patient specific concerns

If you have any **specific concerns or personal risks** to you from your treatment, you can record them here. Please use this space to **record any concerns around allergies / reactions** and also any life saving **procedures that you do not wish to be carried out** without further discussion.

Any extra procedures which may become necessary during the procedure:

Blood transfusion:

Other procedures (please specify): _____

Patient name: _____

NHS or Hospital number: _____

Statement of healthcare professional

(to be filled in by health professional with appropriate knowledge of proposed procedure)

- I am suitably trained and competent and have sufficient knowledge to consent this patient in line with the requirements of the of my regulatory body.
- I have discussed what the treatment is likely to involve, the benefits and risks of this procedure.
- I have discussed the benefits and risks of any available alternative procedures or treatments including no treatment.
- I have considered any additional patient-specific factors and discussed these with the patient alongside their particular concerns.
- I can confirm that the patient has the capacity to give consent.

Patient information leaflet provided: Yes / No – Details: _____

Copy of consent form accepted by patient: Yes / No

Name: _____

Job title: _____

Date: _____

Signature: _____

Statement of patient

Please read this form carefully. If you have any further questions, do ask – we are here to help you. You have the right to change your mind at any time, including after you have signed this form.

You must consent to the following section to proceed with your surgery:

- I confirm that I have read and understood pages 1 to 5 of the consent form.
- I understand the diagnosis and agree with the course of treatment described on this form.
- I have had the opportunity to discuss treatment alternatives, including no treatment.
- I have had the purpose, aims and possible risks of treatment explained to me.
- I understand that the operating person, who will have appropriate expertise to carry out the procedure, may not have been involved in my pre-operative assessment or care to date.
- I understand my anaesthetic options will be or have been discussed with an

anaesthetist where we will jointly decide which option is best for me. I understand that the type of anaesthesia may need to be altered if there are any complications during the procedure.

- I have been told about additional procedures which are necessary prior to treatment or may become necessary during my treatment. This may include permanent skin marks, photographs, and / or tissue samples to help with treatment planning and identification.
- I understand that any procedure in addition to those described on this form will only be carried out if it is necessary to save my life or to prevent serious harm to my health. I have spoken to my health care professional about any lifesaving procedures I do not wish to happen.
- I understand that relevant and appropriate patient specific data for this procedure will be collected and may be used in the context of providing clinical care, and/or audit purposes in compliance with Data Protection Act (2018).

Additional Consent: This section will not stop you from receiving surgery but will help with future learning and training. Please tick if you consent:

- I understand that there may be health care professionals that are training during my procedures such as medical students, and trainee nurses. I consent that they may participate in examinations relevant to my procedure, supervised by a fully qualified professional.

- I understand that information collected during my procedure including images, may be used for education and research (which may be published in medical journals). All information will be anonymised and used in a way that I cannot be identified.
- I agree that my health records may be used by authorised members of staff, who are not directly involved in my clinical care, for research approved by a research ethics committee and in compliance with the Data Protection Act (2018).

Tick if relevant: I confirm that there is no risk that I could be pregnant.

Anaesthesia

Anaesthetic is used to allow surgery to take place painlessly. It may include medicines which put you to sleep or those which only numb the area you are having operated on while you remain awake. This can be done in a variety of ways and your anaesthetist will advise you on your options and talk to you about the risks, complications, and benefits of types of anaesthetic. If there are particular anaesthetic risks/concerns for any particular patient these should be separately documented in the patient's records.

Anaesthetic options and risks will be discussed with you on the day of surgery with an anaesthetist. This is a shared decision-making process, and you will jointly decide and agree which anaesthetic option is best for you. Please remember that if there are any complications during surgery, your anaesthetist may need to alter the type of anaesthesia and will explain this to you before the procedure.

For further information about the types of anaesthetic you may receive, and potential risks please see information below.
