

This form should only be used if the patient has capacity to give consent. If support is required with consent (interpreter, witness, carer, guardian, parent, or any other relevant support) please ensure they are present. If the patient does not legally have capacity, please use an appropriate alternative consent form from your hospital or hub. This form will be the result of a shared decision conversation between a clinician and patient. "You / your / me / my" hereby refers to the patient.

Please note it is common NHS practice for your consent to be taken by a clinician other than the operating or listing surgeon. This clinician will be suitably trained and competent to take consent. They will be referred to as the "responsible healthcare professional" in this form.

You will be provided with additional patient information about your procedure by your hospital or hub site. These will be provided in a language and format that suits you.

You may have questions before starting, during or after your procedure. Contact details are provided for any further queries, concerns or if you would like to discuss your treatment further. The risks quoted in this consent form for surgery assume that you have no additional factors which would increase your risk. The clinician discussing the consent with you will explain if you have health conditions or factors that may increase your risk.

Details of Circumcision

Circumcision Procedure:	This procedure involves: the removal of the entire foreskin to leave the head of the penis (glans penis) exposed. Absorbable stitches are used which disappear after two to three weeks.
Extra procedures: (Tick as appropriate)	<input type="checkbox"/> Glans penis biopsy <input type="checkbox"/> Dilatation / stretching of the entrance to the waterpipe (urethral meatus).
Indication for, and purpose of surgery / benefits: (Tick as appropriate)	<input type="checkbox"/> A tight, non-retractile foreskin (phimosis) <input type="checkbox"/> Recurrent infections under the foreskin (balanitis) <input type="checkbox"/> Skin disease on the foreskin and glans (head of penis) <input type="checkbox"/> Chronic Inflammation or lichen sclerosus <input type="checkbox"/> Large warty lesions of the foreskin <input type="checkbox"/> Cancerous or pre-cancerous lesions of the foreskin <input type="checkbox"/> Other(s)
Alternatives considered: (Tick as appropriate)	<input type="checkbox"/> Topical creams and washes (including short-term use of steroid cream) For phimosis, these may decrease inflammation and relieve some tightness, but symptoms often return once the treatment is stopped. They are not suitable, or effective, in all patients and your specialist will be able to advise you accordingly. Circumcision is usually necessary if topical agents fail. <input type="checkbox"/> Dorsal slit of the foreskin Involves incising (cutting) the tip of your foreskin to relieve the tightness which is preventing retraction. <input type="checkbox"/> Frenuloplasty Cutting the frenulum on the underside of the penis if this is where the foreskin is most tight. <input type="checkbox"/> Conservative management Conservative management is a term used when a condition is managed without surgery or other invasive procedures or treatments. You may choose not to have surgery and live with these symptoms which may stay the same or get worse. If symptoms worsen you might choose to have surgery later in life if appropriate. Changes such as weight-loss, reducing strenuous activity, physiotherapy, and anti-inflammatory medications may help to reduce symptoms. <input type="checkbox"/> Other(s)

Possible early or short-term risks

Uncommon Unlikely to happen (fewer than 1 in 20) 	Infection Infection of the incision requiring antibiotics or very rarely surgical drainage. Bleeding Bleeding from the wound, occasionally requiring a further procedure.
------------------------------------------------------------------------------------------------------------------------------------------------------	--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

Possible late or long-term risks

Expected Will probably happen 	Swelling Swelling of the penis which usually lasts a few days. Sensitivity Increased sensitivity of the head of your penis which can last for a few weeks.
Uncommon Unlikely to happen (fewer than 1 in 20) 	Cosmetic Dissatisfaction with the cosmetic result. Sensation Permanent altered or reduced sensation in your glans penis (head of the penis).
Rare Probably won't happen (fewer than 1 in 100) 	Oedema Permanent swelling of skin around the circumcision scar requiring further surgery and skin removal.

Patient
Specific Risks

Patient specific concerns

If you have any **specific concerns or personal risks** to you from your treatment, you can record them here. Please use this space to **record any concerns around allergies / reactions** and also any life saving **procedures that you do not wish to be carried out** without further discussion.

Any extra procedures which may become necessary during the procedure:

Blood transfusion:

Other procedures (please specify): _____

Patient name: _____

NHS or Hospital number: _____

Statement of healthcare professional

(to be filled in by health professional with appropriate knowledge of proposed procedure)

- I am suitably trained and competent and have sufficient knowledge to consent this patient in line with the requirements of my regulatory body.
- I have discussed what the treatment is likely to involve, the benefits and risks of this procedure.
- I have discussed the benefits and risks of any available alternative procedures or treatments including no treatment.
- I have considered any additional patient-specific factors and discussed these with the patient alongside their particular concerns.
- I can confirm that the patient has the capacity to give consent.

Patient information leaflet provided: Yes / No – Details: _____

Copy of consent form accepted by patient: Yes / No

Name: _____

Job title: _____

Date: _____

Signature: _____

Statement of patient

Please read this form carefully. If you have any further questions, do ask – we are here to help you. You have the right to change your mind at any time, including after you have signed this form.

You must consent to the following section to proceed with your surgery:

- I confirm that I have read and understood pages 1 to 5 of the consent form.
- I understand the diagnosis and agree with the course of treatment described on this form.
- I have had the opportunity to discuss treatment alternatives, including no treatment.
- I have had the purpose, aims and possible risks of treatment explained to me.
- I understand that the operating person, who will have appropriate expertise to carry out the procedure, may not have been involved in my pre-operative assessment or care to date.
- I understand my anaesthetic options will be or have been discussed with an

anaesthetist where we will jointly decide which option is best for me. I understand that the type of anaesthesia may need to be altered if there are any complications during the procedure.

- I have been told about additional procedures which are necessary prior to treatment or may become necessary during my treatment. This may include permanent skin marks, photographs, and / or tissue samples to help with treatment planning and identification.
- I understand that any procedure in addition to those described on this form will only be carried out if it is necessary to save my life or to prevent serious harm to my health. I have spoken to my health care professional about any lifesaving procedures I do not wish to happen.
- I understand that relevant and appropriate patient specific data for this procedure will be collected and may be used in the context of providing clinical care, and/or audit purposes in compliance with Data Protection Act (2018).

Additional Consent: This section will not stop you from receiving surgery but will help with future learning and training. Please tick if you consent:

- I understand that there may be health care professionals that are training during my procedures such as medical students, and trainee nurses. I consent that they may participate in examinations relevant to my procedure, supervised by a fully qualified professional.

- I understand that information collected during my procedure including images, may be used for education and research (which may be published in medical journals). All information will be anonymised and used in a way that I cannot be identified.
- I agree that my health records may be used by authorised members of staff, who are not directly involved in my clinical care, for research approved by a research ethics committee and in compliance with the Data Protection Act (2018).

Tick if relevant: I confirm that there is no risk that I could be pregnant.

Anaesthesia

Anaesthetic is used to allow surgery to take place painlessly. It may include medicines which put you to sleep or those which only numb the area you are having operated on while you remain awake. This can be done in a variety of ways and your anaesthetist will advise you on your options and talk to you about the risks, complications, and benefits of types of anaesthetic. Further if there are particular anaesthetic risks/concerns for any particular patient these should be separately documented in the patient's records.

Anaesthetic options and risks will be discussed with you on the day of surgery with an anaesthetist. This is a shared decision-making process, and you will jointly decide and agree which anaesthetic option is best for you. Please remember that if there are any complications during surgery, your anaesthetist may need to alter the type of anaesthesia and will explain this to you during the procedure.

For further information about the types of anaesthetic you may receive, and potential risks please see information below.
